

DDPAI Hardwire Kit for MINI

DDPAI Hardwire Kit for MINI

Ref: 6934915200856

Power adapter for DDPAI MINI video recorder

Enjoy up to 30 times longer recording time and use parking mode 24 hours a day without interruption. The DDPAI Hardwire Kit Power Adapter supports advanced IPS power management technology and intelligently recognizes vehicle status. It is also easy to install and protects the video recorder and vehicle battery. It is equipped with different types of fuses, making it compatible with most car models. It also stands out for its impressive durability.

Reliable parking mode

Take care of your car's safety around the clock. The adapter intelligently detects the status of your vehicle thanks to its ACC+ constant power wiring technology. When you connect it to your MINI camera, it will allow it to start recording in timelapse mode (at 1 frame per second) as soon as you turn off the car's engine. The solutions used ensure up to 30 times longer video recording time and reliable parking monitoring 24 hours a day.

Protection of the camera and vehicle battery

The power adapter is designed to protect both the video recorder and your vehicle's battery from damage. The camera is protected against overload, short circuit and overcurrent. If the vehicle's battery voltage drops below 11.8V, 12V or 12.4V, the camera will automatically shut down to protect it from damage.

Easy installation

The adapter allows you to power the camera from the fuse box, rather than from the cigarette lighter socket, so you can mount it in such a way that its cable will be almost completely invisible. Installation of the product is very simple and fast. So little is needed to ensure the safety of your car!

Wide compatibility

What else makes the DDPAI Hardwire Kit adapter stand out? Wide compatibility! The product is equipped with a micro USB connector, which is perfect not only for car video recorders, but also for GPS devices, for example. Take care of a reliable power source for your chosen equipment and don't worry about running out of power at the least opportune moment!

Refined to the last detail

The adapter is also distinguished by its carefully considered design. Small, thin and pleasant to the touch - it looks extremely modern and elegant. The device is also incredibly durable and resistant to interference, damage or wear. It also works in high and low temperatures without problems.
