Filter 52 MM Blue-Coated CPL MC K&F Concept KU12

Blue Filter 52 mm CPL MC K&F Concept KU12

K&F Concept's CPL filter is an indispensable piece of equipment for any photographer who strives for excellent results. The accessory not only effectively eliminates glare, resulting from the reflection of light from non-metallic surfaces, but also improves color saturation, especially for skies and vegetation. High-quality Japanese optical glass is used for its manufacture, and its extremely thin, rotating frame allows you to adjust the level of polarization to suit a particular situation. You will successfully use it in combination with wide-angle lenses without worrying about the vignetting effect.

Fantastic effects at your fingertips

The CPL filter will help you raise the quality of your photos to a higher level! Its main function is to reduce glare and eliminate unwanted light reflections, which significantly improves the quality of your photos. However, that's not all! This filter also intensifies the colors, especially of the sky and vegetation, giving your photos an amazing expression. It will give you fuller and more dynamic shots that stand out.
