

Filter Nano-X 52 mm XV38 K&F Concept

Filter Nano-X 52 mm XV38 K&F Concept

Ref: 6936069266610

K&F Concept Nano-X 52mm ND2-ND32 XV38 filter

Get even better photo results with the K&F Concept filter. The product eliminates the X effect and prevents flare. It will work well when photographing water or dynamic subjects, and its sturdy construction ensures resistance to damage. In addition, for this filter the lens hood should be 40.5mm.

ND2-ND32 filters

You can adjust the filter from ND2 to ND32, thus controlling the amount of light entering the lens. It is perfect for photographing rivers, waterfalls or moving objects and allows you to capture the blur effect.

Thoughtful design

The filter was created from high-quality AGC glass and is distinguished by high light transmission. What's more, it consists of 28 nano-coatings that protect against water, scratches and glare. The non-slip design makes it easy to install and remove, and the clever design has avoided the X-effect that occurs when the filter stages cross each other.
