Thunderrobot K87 Wired Mechanical Keyboard Red Switch (green)

Thunderrobot K87 Mechanical Keyboard, Red Switch (Green)

Get to know the Thunderrobot K87 mechanical keyboard, which combines advanced technology and impeccable craftsmanship. It ensures precise registration of every click, even when they occur simultaneously. Ergonomically designed concave keys provide comfort and the assurance that your fingers will rest securely on the keys. Additionally, the ability to swap switches and support for 3-pin versions give you complete freedom to customize the keyboard to your own needs. The key surface, resistant to grease and scratches, combined with anti-slip feet, makes the Thunderrobot K87 not only functional but also durable. And if you add elegant backlighting and practical shortcut keys, you get a device designed for the most demanding users.

Unparalleled Precision and Responsiveness

When every click matters, you need a keyboard that won't let you down. Thanks to Thunderrobot K87's simultaneous click detection technology, no command will be missed. Furthermore, the keys are equipped with red switches that respond at a mere 45g of pressure and have precisely balanced actuation distance. This combination ensures lightning-fast response and precise performance during intense gaming sessions or work.

Ergonomic Shape

The keyboard is comfortable to use, designed in line with the cherry layout to provide comfort during typing and gaming. The ergonomic,

concave shape of the keys allows your fingers to naturally align with them. Additionally, the key surface is resistant to grease and scratches, allowing the keyboard to stay in fantastic condition for a long time.

Customized to Individual Needs

Thunderobot K87 is not limited to just one type of switch. If you want to change the typing or gaming experience, you can replace the switches with the included tool and spare switches. The keyboard also supports 3-pin switches and dummy switches, which provide better stability for wide keys and partially reduce noise.

Backlighting and Shortcut Keys

The backlighting of the Thunderobot K87 keyboard is not just about aesthetics but also functionality. It offers up to 8 different modes that you can switch in just a few seconds using the Fn key and keys 1 to 8. This allows you to adjust the color scheme and lighting style to your preferences, depending on your mood, needs, or task. But that's not the end of the keyboard's capabilities - Thunderobot K87 is also equipped with practical shortcut keys. They allow you to quickly switch between gaming modes (FPS and CF) and instantly access recording and stop recording functions. This saves you valuable time and gives you an advantage over competitors without interrupting your gameplay or work.

Height and Tilt

K87 also features rubberized foldable feet, allowing you to use it at two tilt angles according to your needs. When flat, the keyboard housing has a height of 23.5mm, gradually decreasing to 17.5mm.
