Wireless Controller / Gamepad Thunderrobot G25 (White)

Thunderrobot G25 is a wireless controller with which the user can comfortably control in-game events from a convenient distance of up to 10m. The device offers wireless connectivity through Bluetooth, a Bluetooth receiver, but also wired connectivity (a cable is included in the set). It boasts a range of advantages - one of them is the TURBO button, which allows a series of actions, e.g., shots, to be triggered with a single press, helping the player achieve a higher score. Another advantage is the ability to swap the functions of the left joystick and the D-pad buttons, allowing the player to adjust them to individual preferences, as well as adjusting the intensity of the controller's vibration or the positioning of the joysticks, to name just a few benefits.

Safety During Charging

Thunderrobot G25 is equipped with technology developed by Raytheon, ensuring user safety during device use. When the battery reaches a temperature above 45°C or below -10°C, the device stops charging. This feature is particularly important because many people plug the device in for charging overnight while they go to sleep, so this technology protects them during times when they cannot monitor the device's condition.

Ergonomic Design and Stylish Appearance

The controller features a matte surface, blue light accents, and black keys with letters in various colors and black joysticks with both

matte and shiny surfaces. The materials used ensure that the device fits securely in the player's hands even during dynamic gameplay while looking aesthetic, suiting the taste of many users.

Three Connectivity Modes

Thanks to wireless connectivity, it can connect with consoles, laptops, smart TVs, and more. The controller also operates using a Bluetooth receiver and wired (cable included in the set), providing the user with a versatile device that lets them play however they like the most.

Positioning

Adjusting the joystick's deviation from the center is one of the functions that avid gamers will appreciate. The user can choose how much the joystick deviates from the center it is located in. This is helpful for aiming and accelerating.

Vibration Intensity

Thunderobot G25 allows adjusting the vibration intensity at levels of 0%, 30%, 70%, and 100%. This function is crucial, for instance, during sudden, unexpected events in gameplay, intended to shock the player - the controller's vibrations enhance the gaming experience, making the game feel even more real.

Package Contents

Controller x 1
Bluetooth Receiver x 1
Manual x 1
Cable x 1
Brand Thunderobot
Model G25
Color White
Battery Capacity 450mAh
Charging Time 3h
Operating Time 15h
Weight 193g
Working Distance 10m
