TWS ONIKUMA T37 Headphones

Discover a new dimension of sound and comfort with TWS ONIKUMA T37 headphones! Thanks to the innovative Air Conduction technology, the sound is transmitted directly to your ears, allowing you to enjoy natural sound. They support Bluetooth 5.3, which is responsible for uninterrupted connection with your device. They are lightweight and compact, which makes them ideal for travel or physical activities.

A new era of sound

Air Conduction technology allows sound to be transmitted directly to your ear by conducting it through the temporal bones. This means you'll experience sound in a whole new way - clear, balanced and extremely immersive. This is ideal for active people who want to stay in touch with their surroundings while listening to their favorite music.

Stable connection

Worried about connection problems or audio delays? Don't be! The headphones use the latest version of Bluetooth 5.3 technology, which guarantees a more stable and faster connection to the device of your choice. It also provides an amazing low latency of just 85 ms. This allows you to enjoy perfectly synchronized sound and video while watching movies or playing games.

Listen to music without interruption

Whether you're on the go, out and about, or just relaxing at home, the ONIKUMA T37 will always be ready to provide you with fantastic quality sound. The headphones offer up to 10 hours of uninterrupted use, so you can enjoy your favorite music or podcasts for a long time without worrying about having to recharge. Charging them won't take you long - after 2 hours they will be ready for use again.
