

Monitor Light Bar Blitzwolf BW-CML2, RGB

Monitor Light Bar Blitzwolf BW-CML2, RGB

Ref: 5907489607322

RGB Monitor Lamp

The BlitzWolf RGB monitor lamp will add a whole new atmosphere to your gaming experience and increase your comfort. It features an adjustable color temperature range of 2700K-6500K, and also allows you to adjust the brightness.

Customize the color to your liking

The lamp has 15 light modes, so you can adjust it perfectly to your needs and create a real gaming atmosphere in your own home.

Adjust color temperature and brightness

You can control the color temperature between 2700K-6500K, as well as the brightness. Cold light is best for working, warm light for relaxing, and mixed light for reading. Choose the right one for you depending on the situation.

Perfect design

The lamp has a specially designed design that makes the lamp light fall in such a way to reduce the flickering of light from the monitor, and also to eliminate glare. It makes your eyes less tired and you can work longer and more comfortably.

Touch control

You can control the lamp with a touch panel. With one touch you can switch the lamp on and with a double touch you can switch it off. With a short press, you can adjust the brightness and with a longer press you can adjust the colour temperature. A short touch turns on the RGB modes (15 modes) and a long touch turns them off.

Easy and quick installation

The lamp is quick and easy to mount. It is ideal for monitors with a thickness of 15-25mm. How to do it? First clean the surface of the monitor. Then peel off the adhesive protection and stick the plate in the middle of the monitor (the side must be on the side of the monitor). Then put one end of the USB cable through the bottom of the bracket and adjust the plate.
