

## Cordless vacuum cleaner INSE S6P Pro

Bezšňůrový tyčový vysavač INSE S6P Pro

Ref: 6975907030235

### INSE S6P Cordless Stick Vacuum Cleaner

The INSE S6P cordless stick vacuum cleaner offers a unique combination of modernity and functionality, perfect for maintaining cleanliness in any home. With its cordless design, powerful suction power of 23000Pa, and long working time of up to 45 minutes, it ensures exceptional performance and user comfort. This model also features a five-layer filtration system, which effectively separates and traps dust particles, providing a healthier home environment. Additional LED lighting on the floor brush makes precise cleaning even in hard-to-reach places easier, and a versatile set of accessories makes the INSE S6P ready for any challenge.

### LED Illumination

The INSE S6P vacuum offers an innovative floor brush with LED lighting, which is a significant advantage during cleaning. With this solution, users can easily spot and remove dirt from dark corners and under furniture, where daylight doesn't reach. This is particularly useful when removing dust and hair, which often escape our attention, resulting in a higher level of cleanliness and user comfort.

### Five-Layer Filtration System

The five-layer filtration system in the INSE S6P ensures exceptionally thorough air purification from dust and allergens. Each filtration layer is designed to remove various types of pollutants, making the air emitted by the vacuum cleaner clean. This system is especially important for allergy sufferers as it minimizes the risk of irritation and allergic reactions.

### 2-in-1 Design

The INSE S6P stands out with its ability to quickly transform from a stick vacuum to a handheld one. This feature makes the vacuum extremely versatile, allowing for thorough cleaning not only of floors but also of furniture, stairs, and even car interiors. This flexibility makes it an ideal tool for quick and effective cleaning in any conditions.

### Energy Level Indicator

Equipping the vacuum cleaner with an energy level indicator is another practical feature that enables efficient management of the device's working time. Users can check the remaining energy level at any time, allowing for better cleaning planning and preventing unexpected device shutdowns.

### Package Contents
