IMOU AC1200 Dual-Band Wi-Fi Router

Ref: 6971927237500

Router Dual-Band Wi-Fi IMOU AC 1200

Router Dual-Band Wi-Fi IMOU AC1200
The IMOU Dual-Band Wi-Fi Router with a data transmission speed of up to 1200 Mbps opens up new possibilities for your home internet. With the Imou Wi-Fi Auto Sync feature, it allows synchronization with various devices, and support for IPTV enables seamless usage of interactive internet TV. The dedicated application provides access to a range of practical functions.

Reliable Transmission
Utilizing 802.11ac technology, the IMOU router provides exceptionally fast Dual-Band Wi-Fi that proves to be reliable in various applications. The signal penetrating through walls ensures full Wi-Fi coverage in your home, and the clean and fast connection allows smooth streaming of 4K HD content and gaming.

Remote Management
Using the Imou Life application, available on the App Store and Google Play, you can remotely manage your Wi-Fi network and connected devices anytime using your smartphone. You'll have access to features such as power on/off, Wi-Fi connection control, and application management.

Auto-Sync Wi-Fi for IMOU Cameras

The IMOU router automatically connects to IMOU IPC cameras. Forget about complicated configurations and manual pairing – simply place the camera within the router's range and take a step towards a smart home where devices cooperate seamlessly!

Accelerated Streaming
Stream data from IMOU IPC cameras through a dedicated channel, allowing for smooth monitoring and reducing the risk of cloud data loss, even in crowded Wi-Fi signals. Ordinary routers use standard transmission, while the IMOU product optimizes data flow for dedicated cameras.

Parental Control
With IMOU, you can conveniently create an online activity schedule for your children, prioritizing their online safety and promoting healthy digital habits. The Parental Control feature allows parents to decide on internet access hours, fostering responsible digital behavior among young users.

Guest Wi-Fi
Expecting guests? With IMOU, you can configure a separate guest Wi-Fi network and set a schedule for guest signal availability. This allows you to maintain the privacy of your network while being a generous host.
