Headlight Warsun 68B, 180lm, 500mAh, M-USB

Ref: 6976337900631

Warsun 68B headlamp flashlight, 180lm, 500mAh, M-USB

Looking for a flashlight for special tasks? You just found it! Warsun 68B is a multi-mode headlamp flashlight with a brightness of 180 lm. Equipped with a solid rechargeable battery, it provides 5-10 hours of operation, depending on the selected function. It is sturdy and resistant to everyday use, including moisture and falls from as high as 2 meters.

Reliable illumination

The Warsun 68B flashlight uses two light sources - LEDs and XPE LEDs. As a result, it stands out for its tremendous performance and longevity. It provides triple illumination, including two side lights with a brightness of 100 lm, and the third, the main light with a brightness of 180 lm. You can adjust the angle of the light within 45 degrees.

Light modes to suit your needs

The 68B was created with the most demanding conditions in mind. It provides up to 6 light modes, including 3 main light intensity modes (strong/medium/weak). It also offers a side mode light source change, as well as red light and red SOS mode. This flashlight will not only light your way, but will make it easier to call for help in case of an emergency.

Sturdy construction

Made of ABS and PVC, it ensures that it can withstand daily use. You don't have to worry about dropping it - a fall from a height of 2 meters won't hurt it. It's also IPX4 splash resistant, so it's not threatened by light rain or exploring a damp cave.

Powerful battery

The use of LEDs gives the flashlight greater energy efficiency and an even longer life. The device uses a robust 500 mAh rechargeable battery, and depending on the mode selected, it can operate for 5-10 hours. It takes 3 hours to fully charge the flashlight, which will be facilitated by the included Micro-USB cable.

Included

Flashlight

MicroUSB cable

☐Manufacturer

☐Warsun
