DJI RC Plus Controller (DJI Inspire 3)

The DJI RC Plus is a professional remote controller that provides an even better drone control experience. It is equipped with a 7-inch display and offers several buttons whose functions can be freely configured. What's more, the built-in rechargeable battery, combined with an additional external battery (sold separately), guarantees a runtime of up to 6 hours. You'll also find useful accessories such as a strap and waist support included.

Controller for demanding users

Take control. The DJI RC Plus controller is distinguished by its 7-inch screen, whose brightness reaches 1,200 nits. This makes it great for outdoor use - it guarantees a clear image even in bright sunlight. You also have at your disposal several buttons and dials, the functions of which can be adjusted to your needs and habits. In addition, the included accessories (strap and waist support) will provide you with greater comfort - even during prolonged use.

Long working time

Don't worry that the controller will discharge too quickly and interfere with your work. The DJI RC Plus can serve you for up to 6 hours - just get an external battery, which is available for purchase separately. Fly for as long as you need, create great aerial shots and make your best video! That's not the end of the possibilities, though. The camera supports hot-swapping, so you can replace the battery at any

time without having to turn it off.
