

Osmo Action Suction Cup Mount

Osmo Action Suction Cup Mount

Osmo Action suction cup mount

Attach your camera to your bike, motorcycle or car and create original shots from an unusual perspective. The suction cup mount designed for the DJI Osmo Action, DJI Action 2 or DJI Osmo Action 3 is distinguished by its high suction power, so it can provide your device with the necessary stability. At the same time, it is very easy to install and durable. It also offers a special ball joint that allows you to rotate the camera attached to it by 360°. As a result, you will get more interesting viewing angles! You also don't have to worry about damaging the surface of your vehicle.

Take care of safety

Remember to use the accessory only on smooth, flat, non-porous surfaces. Also, do not expose it to impacts. If you attach it to a car, motorcycle or other vehicle, drive only on level roads and do not exceed 80km/h. It is also recommended to use an additional safety tether to avoid the camera falling and getting lost.
