Electronic Baby Monitor Lollipop (Pink) CAB-LOL03EUPK01

The Lollipop electronic nanny model CAB-LOL03EUCY01 is an innovative solution for parents who want to provide their child with maximum safety and comfort, while enjoying the convenience of remote monitoring. Offering images in stunning FullHD (1080p) quality at 30 frames per second (including at night), and with a dedicated app for unlimited streaming from multiple cameras, two-way communication, automatic notifications of important events, monitoring of baby's health, and a free 7-day trial period for sleep monitoring, Lollipop offers comprehensive support for baby care. It's a device that not only allows continuous observation, but also interaction with the child, providing peace of mind for all parents. The camera's flexible design is an added bonus, allowing you to place it in non-obvious places, such as the crib rungs or your little one's favorite mascot. This gives you a new perspective and the ability to watch your baby up close when you can't be next to him!

Unlimited Streaming from Multiple Cameras

Thanks to the dedicated Lollipop electronic baby monitor app, you can stream video from any number of cameras. This feature is invaluable when there is more than one child at home or you want to have a view of different rooms. It makes managing time easier and increases monitoring efficiency, providing a fuller picture of the situation at home.

Two-Way Communication

Two-way communication is a key feature that not only allows you to hear every sound in the child's room but also enables the child to hear the parent's voice. This functionality transforms the electronic baby monitor into a true interactive caregiving tool, allowing you to comfort the child with lullabies or white noise, even when you are elsewhere. It significantly enhances the child's comfort and peace of mind for the parent.

Automatic Notifications

The device sends automatic notifications to the parent's phone when it detects crying, an attempt to get the baby out of the crib, or noise. This allows parents to respond immediately to their baby's needs and possible dangers, providing an extra layer of security and peace of mind. The Lollipop electronic nanny can also monitor changes in temperature, humidity or air quality in the room when working with an additional sensor, available for sale separately.

Health Monitoring

Lollipop's innovation also lies in its ability to monitor the child's health without the need for additional devices. The app provides access to history and charts related to blood pressure, heart rate, and sleep quality, which are extremely useful for tracking the child's overall health and identifying potential health issues at an early stage.

7-Day Free Trial

Offering a 7-day free trial for child sleep monitoring is a significant convenience that allows parents to closely track sleep patterns, activity, or moments when the child was out of camera range. This feature is especially valuable for new parents who are learning to recognize and adjust to their child's needs.

Manufacturer

Lollipop

Model

CABC-LOL03EUCY01

Color

Pink

Mobile device requirements

Bluetooth 4.0 (BLE) ; Android 4.4 (KitKat) or later ; iOS 9.0 or later
