Edifier MP230 wireless speaker

A successful combination of modern technology and retro style? Edifier proves that it is possible! The MP230 speaker looks extremely elegant and guarantees excellent sound quality thanks to its 48mm drivers and Class-D amplifier. The durable battery provides up to 9 hours of operation on a single charge, and Bluetooth 5.0 is responsible for a reliable wireless connection. The device also lets you play music from a TF card or via an AUX cable.

Delightful sound experience

What makes the MP230 speaker play so well? Its stereo acoustic system consists of 2 48mm drivers and an integrated dual passive radiator. All this provides an expanded sound field, crisp treble, enhanced bass and rich detail. What's more, DSP technology and an advanced Class-D amplifier guarantee crystal clear sound and lossless quality.

Several connectivity options

Play music freely from the source of your choice. The MP230 speaker supports Bluetooth 5.0, which provides fast, stable wireless transmission, longer operating time and greater immunity to interference. You can also connect it to a device of your choice using an AUX cable. It is also possible to play music using a sound card or TF card.

Many hours of music

Now you can listen to music uninterrupted even throughout the day. The speaker is equipped with a high-end lithium-polymer battery with a capacity of 2500 mAh, which allows you to play your favorite songs for up to 9 hours on a single charge. This makes it perfect not only at home, but also on a trip or picnic, for example, allowing you to listen to songs, podcasts or audiobooks almost anywhere.

Practical and stylish buttons

Convenient operation of the speaker is made possible by specially designed buttons, which are a perfect imitation of piano keys. They are extremely pleasant to the touch and easily yield to your fingers. With their help, for example, you can turn the MP230 on or off, pause or resume playback, start Bluetooth mode, switch a song or adjust the volume.

Perfect for retro lovers

Inspired by the 1950s and 1960s, the speaker's design is sure to appeal to retro lovers. The wooden housing not only looks extremely elegant, but also feels pleasant to the touch and minimizes acoustic resonance, resulting in even better sound quality. What's more, there are special pads on the bottom of the device to isolate unwanted vibrations and give it more stability.

Kit contents:
