Edifier Airpulse SM200 Speaker (black)

Get ready for an unparalleled musical experience with a high-end speaker that transforms your room into a home concert hall. The aluminum ribbon horn tweeter guarantees faithful reproduction, offering a full spectrum of sound without delay. With a 5.25-inch aluminum midrange and woofer, you can enjoy ultra-low bass that literally vibrates in the air. Whether you're listening to music, watching a movie or playing games, Edifier will give you the best experience. But that's not all! The speaker stands out for its solid construction, offers adjustable parameters and is easy to use. All this makes you love the Airpulse SM200.

Crystal clear highs

The Edifier Airpulse SM200 is equipped with an aluminum ribbon horn tweeter that offers full bandwidth and incredible response speed. Designed with absolute precision in mind, it guarantees faithful sound reproduction, delivering fantastic sound full of detail. You'll rediscover your favorite tunes with this set!

Feel the depth of the bass

The 5.25-inch mid-bass unit with an aluminum diaphragm provides an unparalleled source of ultra-low-frequency sounds. The use of long excursion technology allows for increased vibration amplitude, which in practice means even deeper, more saturated bass. As a result, even the subtlest low notes are accurately reproduced, adding depth to the music and filling the room with full, rich sound. You'll feel

that bass in your gut!

Enhanced design

A key element of the Airpulse SM200 speaker is its rugged construction, which definitely contributes to exceptional sound quality. The sturdy MDF enclosure serves as a stable platform that effectively minimizes any vibrations unrelated to sound reproduction, ensuring a clear and undistorted signal. This is complemented by an improved transparent wiring system, the use of which ensures optimal signal transmission, eliminating conduction losses and ensuring that every tone is faithfully reproduced. Forget about annoying crackles and noises!

Amplified audio signal

The speaker uses an advanced bi-amping system designed to optimize signal management. Combined with a digital-analog amplifier system, it provides precise audio amplification at every stage of playback, resulting in powerful, crystal-clear sound.

Customize parameters

Adjustable filter parameters allow you to tailor the speaker to your specific acoustic environment and engineering requirements. This means you'll be able to tune the speaker to your home's specific conditions, achieving the perfect balance of sound. In our speaker, we've combined advanced technology with easy operation to bring you the ultimate sound experience without compromise. Enjoy the sound you deserve!
