

Wireless headphones TWS Edifier NeoBuds Pro 2, ANC (black)

Ref: 6923520246984

Wireless headphones TWS Edifier NeoBuds Pro 2, ANC (black)

TWS Edifier NeoBuds Pro 2 headphones, ANC (black)

Edifier NeoBuds Pro 2 are high-quality headphones with premium sound - they are Hi-Res Audio certified for devices that provide sound better than a CD. Thanks to capacious batteries, you can enjoy music for 4 hours on a single charge, and with the help of a charging case - for another 12 hours. Equipped with a total of 8 microphones with ambient noise cancellation (ENC), you can talk freely without worrying about constant repetition. The included 7 pairs of rubber bands in different sizes will ensure that the headphones sit securely in your ears. What's more, the wearing detection feature makes the headphones automatically pause and resume playback so you don't miss your favorite moment in a song. Surround sound will provide an extraordinary listening experience. Do you like to play games? That's a good thing, because Gaming Mode offers seamless synchronization of audio and video to make victories come even easier. And Ambient Aware mode will let you listen to music and stay in touch with your surroundings at the same time, so you can safely go for a run or wait at the train station or airport without worrying about missing important messages. Sound good? And that's just part of the features!

Edifier's wideband multi-channel ANC

ANC is an acronym for Active Noise Cancelling, which ensures that you don't hear background noise. This allows you to immerse yourself in music or a TV series while sitting on a train, waiting in line or walking through the city center. The NeoBuds Pro 2 have recently patented technology that ensures even better capture of unwanted sounds.

Long runtime and wearing detection

4 hours on a single charge extended by another 12 hours with the charging case is the result the NeoBuds Pro 2 headphones get with ANC on, while when the feature is off, you can listen to music for 5.5h extended by 16.5h. Still have an hour of travel left and you're only halfway through a movie? Plug the headphones into charging for 15 minutes and you'll get another 2 hours of listening! Any of your fellow passengers ask you something? Thanks to wearing detection, the headphones detect whether you are wearing them - if you take off one or both, they automatically pause the music and resume when you put them back on.

Touch panels

Both headphones feature touch panels that let you control playback, handle calls and switch between modes without having to reach for your phone. Just touch the left or right panel a certain number of times and you'll call up the assigned function.

Top-quality sound

The NeoBuds Pro 2 headphones are certified for Hi-Res Audio, but also have LDAC and LHDC codecs, which ensure that the headphones support a very wide frequency response of 20Hz-40KHz (LDAC) and guarantee fantastic sound quality transmitted via Bluetooth. The built-in Bluetooth 5.3 offers a stable, interference-free connection so you can enjoy the audiophile experience provided by the space sound with head tracking as well, which makes you feel as if no matter which way you turn your head, you are surrounded by compelling realistic sound from everywhere.

Level conversations

Each headphone features 4 microphones with Enviromental Noise Cancellation (ENC), which reduces background noise while extracting your voice so your interlocutors can hear you cleanly and clearly.

During workouts and on the go

The ambient mode is a fantastic solution for people who travel a lot and like to listen to music while waiting at the train station or airport. This mode allows you to simultaneously enjoy the sound of the songs being played and remain aware of your surroundings, such as hearing announcements. Athletes and those who enjoy physical activities will also appreciate this feature, as it increases safety. What's more, IP54 protection guarantees dustproofing and protection from sweat or rain.

Edifier Connect and a handful of additional benefits

Expand your capabilities with the Edifier Connect app! It gives you access to equalizer (EQ) functions, additional settings, the ability to change the color of the LEDs to 8 different versions, and more! Of the additional advantages of the headphones, they have TWS mirroring function, which allows you to set any headphone as the main one, that is, the one keeping the Bluetooth connection. What's more, they also have the ability to connect to two devices simultaneously! From now on, you can effortlessly switch between music, movies or calls on 2 different devices. This gives you an unparalleled user experience.
