Ref: 4710343792888

Darkflash DK210 computer case

With the DK210 computer case you will build your computer, while taking care of proper space organization. The side panels can be quickly and conveniently removed, making it much easier to clean and expand your hardware. The model also allows you to achieve an optimal cooling system, and built-in ports such as USB 3.0 allow convenient installation of cabling. The side and front of the case are made of durable tempered glass, which gives it a unique and stylish character.

Stylish and functional design

The side panels of the case are mounted with wing screws, making their eventual removal extremely easy. So you can easily clean the hardware or upgrade it with new parts. However, that's not all! The tempered glass panel located on the front has been laser engraved - you can synchronize it with the RGB lighting for a stylish, gaming effect.

Equipped with essential ports

Several I/O ports have been placed on the top of the chassis to help you avoid cabling problems and provide unparalleled convenience. These include USB 3.0, USB 2.0 and HD audio, among others. So with Darkflash you'll enjoy lightning-fast file transfers, among other things!

Excellent space organization

The case has been designed to allow you to conveniently install components while keeping things neat and tidy. Appropriate holes and straps allow you to take care of proper cable placement, and special brackets are perfect for installing HDDs or SSDs. You will also decide how you will mount the GPU - horizontally or vertically (in this case you will need a PCI-E cable, which must be purchased separately).

Create an optimal cooling system

With Darkflash you will reduce the risk of your computer overheating. The front panel of the case is equipped with vents for better cooling of the hardware. The model allows the installation of several fans. It is also compatible with heatsinks - up to 360 mm in the front, up to 120 mm in the back, and up to 240 mm at the top.
