Smart Temperature and Humidity Sensor WiFi NEO NAS-CW01W TUY

Ref: 6924715900681

Smart Temperature and Humidity Sensor WiFi NEO NAS-CW01W TUYA

WiFi NEO NAS-CW01W TUYA Temperature, Humidity and Light Sensor

Now you can check the temperature, humidity or light intensity of a room with just a glance. The NEO sensor will provide you with accurate measurements, thanks to its 2.4GHz wireless connectivity. What's more, it stands out with its large and easy-to-read screen. You can easily read the current time and date, and with the alarm clock function you will never fall asleep for an important meeting!

Intelligent sensor

The NEO sensor will allow you to read many parameters. It detects temperature in the range of -10°C~60°C and humidity from 0% to 100%. Thanks to the wireless connection, it gives real-time readings. What's more, it will be convenient to use with its large and easy-to-read display.

Even more possibilities

The NEO is also equipped with a light sensor that gives readings from 0 to 157,000 Lux. What's more, you can also easily read the current time and date from it. You no longer have to worry about falling asleep again for an important meeting, as this equipment is equipped with an alarm clock function. Set it for 8 a.m. when you get up or for 10:30 p.m. when you need to go to bed.

Wireless connection

It's easy to pair the NEO with your phone using Bluetooth 5.0, just make sure your smartphone has access to a 2.4GHz Wi-Fi network. This connection is fast and stable, and what's more, it guarantees accurate real-time readings. With the dedicated app, you can easily control your sensor wherever you are.

Smart home
The NEO sensor was created with comfort in mind, so it is simple and intuitive to use. With its help you can create a smart home, as it has the ability to connect with other devices such as an alarm siren, a smart light bulb or a switch. This gives you the ability to create smart scenes and schedules.

Easy installation
Worried about a difficult and lengthy installation? With NEO devices you can forget about it! Only 3 simple steps separate you from the joint operation of the sensor and your smartphone. All you have to do is connect to a Wi-Fi network, then download the dedicated app and add the device there. What's more, you can install the sensor on the wall or place it on your bedside table. For even easier control, it shows compatibility with systems such as Tuya Smart, Amazon Alexa, Google Assisstant and Tmall Genie.
