

### Smart Temperature and Humidity sensor HomeKit NEO NAS-TH02BH

Ref: 6924715900964

Smart Temperature and Humidity sensor HomeKit NEO NAS-TH02BH ZigBee with LCD screen

Zigbee HomeKit NEO NAS-TH02BH Temperature and Humidity Sensor with Display.

Enjoy convenient access to information about the temperature and humidity in your home. The NEO NAS-TH02BH sensor provides precise measurements, the results of which are presented in the app and on the built-in display. The device is also compatible with the Tuya and Apple Home ecosystems, and it only needs 2 AA batteries to power it, which will ensure a long operating time. You can also choose the temperature unit - available options include °C and °F.

Accurate measurement, information at your fingertips

Be assured of optimal conditions in your home. The NEO sensor measures temperature from 0°C to 50°C and humidity from 1% to 95%. It also allows you to choose the unit (°C or °F). You can find the measurement results in the app or on the device's built-in display, which also shows signal status and battery level.

Simple installation and configuration

Mounting the sensor will not even cause you the slightest problem. You can simply place it on a table or attach it to a wall. Its configuration is also extremely easy and fast - just connect to the network and download the app, then follow a few simple steps.

Even more convenient operation

The sensor is compatible with the Tuya and Apple Home ecosystems. So you can operate it with the app you use every day. What's more, when you connect the device to a Zigbee gateway (not included), you will gain the ability to pair it with other equipment and create smart scenes. This way you can easily make the air conditioner turn on automatically when the temperature exceeds a certain level, and the humidifier start working when the humidity in the environment is too low.
