

Filters Freewell for DJI Air 4 (6-Pack)

Filters Freewell for DJI Air 4 (6-Pack)

Ref: 6972971864353

Freewell set of 6 filters for DJI Action 4

The filters are precisely matched to the DJI Action 4, and you will have no problem installing them. They effectively improve the quality of your photos no matter what the conditions are, and the high quality construction ensures resistance to scratches, dust and greasy stains. The filters are also distinguished by high light transmission. In addition, you will find a protective case and cleaning cloth in the set.

ND filters

ND8/ND16/ND64/ND1000 are neutral density filters that feature different levels of light transmission and reduce exposure by 8/16/64/1000 degrees, respectively. They are perfect for activities such as skiing, mountain biking, skydiving, and skateboarding. They will also find their use when shooting with long exposure times and creating motion blur effects.

CPL filter

The kit also includes a CPL filter, which is an essential tool when photographing reflective surfaces. It effectively darkens the sky, minimizes glare and reflections from water, glass, leaves and other non-metallic surfaces. It effectively improves color and contrast in photos while reducing unwanted reflections.

Included

filters: ND8/ND16/ND64/ND1000, CPL
