

Darkflash DCS120 CPU liquid cooling (white)

Darkflash DCS120 CPU liquid cooling (white)

Ref: 4710343797425

Darkflash DCS120 computer water cooling (white)

Ensure the right working conditions for your computer and give it a unique, modern character. Darkflash DCS120 water cooling provides effective heat dissipation and extremely efficient performance. It also stands out with its colorful ARGB backlighting. It is also compatible with both Intel and AMD processors. Its installation will not be a problem for you - it only takes a few moments!

Wide compatibility

No matter what kind of processor you equip your computer with - Darkflash water cooling will probably be compatible with it! The DCS120 works seamlessly with Intel (LGA 115x, 1200, 1700, 2011, 2011-v3 and 2066) and AMD (AM5, AM4, AM3+, AM3, FM2 and FM1) platforms.

Stunning design

Thanks to its colorful ARGB backlighting, the cooler catches the eye and gets a modern, gaming feel. This is an excellent option for all gaming enthusiasts and more! An additional advantage of the device is the elegant design of the water block. All this means that the DCS120 cooling will make a perfect duo with a transparent case - this way you will get a truly stunning visual effect. You can also synchronize the product with the motherboard (only 5 V 3pin) or control the backlight with the reset button (after connecting the appropriate cable).

Powerful fan

The DCS120 is equipped with a high-performance fan, which has as many as 9 blades and operates at a speed of about 800-2000 RPM. Thanks to this, it can provide your computer with cooling at the highest level! Despite such high capabilities, its operation is surprisingly quiet - the volume level here does not exceed 30.15 dBA. So you don't have to worry about noise when you play your favorite games or work on your projects! In addition, the fan supports PWM function, thanks to which its speed can be automatically adjusted depending on the current CPU temperature.

Always optimal temperature

The water pump of the DCS120 model was created from pure copper and is distinguished by excellent thermal conductivity. As a result, it provides efficient heat dissipation and stably keeps the CPU temperature at the right level. It also features impressive corrosion resistance and long service life. In addition, the improved design guarantees even more efficient operation, and reinforced tubes effectively prevent leaks. All this translates into extremely efficient cooling!

Included

Water cooling Thermal conductive paste Intel & AMD mounting kit Screw set User manual
