Darkflash DR11 5in1 ARGB Computer fan set

Ref: 4710343794790

Darkflash DR11 5-in-1 ARGB computer fan set

A set of five 9-blade Darkflash DR11 ARGB fans will enhance any computer with unparalleled cooling efficiency and spectacular lighting effects. The products combine cutting-edge technology with aesthetics, providing optimal working conditions for advanced computer systems. With their help, you can not only effectively manage the temperature of your components, but also add individual character to your workstation, enjoying smooth operation and reliability at every step. The fans ensure stability and operate surprisingly quietly (22.5dBA).

Double light effect

The dual halo rings of the fans not only illuminate the interior of the computer, but also create a mesmerizing visual effect that enhances the look of any workstation. Internal and external LED lighting strikingly highlights the cooling dynamics.

Reliable operation

The use of Rifle bearings not only guarantees quiet operation, but also extends the life of the fans. RPM stability and reduced friction are other features that distinguish the DR11 ARGB.

Refined blade design

The fan blades are designed to optimize airflow, increasing cooling efficiency while reducing the noise generated. This allows you to use your equipment comfortably and safely.

Compatibility and ease of installation

The Darkflash DR11 ARGB was created with ease of installation in mind - so the kit guarantees quick and simple integration with most cooling systems. Its universal design fits a variety of PC configurations, making it a versatile choice for everyone.

Reliable stability

The fans are equipped with anti-vibration pads that reduce potential vibrations, thus ensuring quiet operation and stability. The high-quality square frame with sharp edges further enhances balance. So you can focus on entertainment or work without any distractions.

Smart Control PWM

Thanks to the PWM function, the DR11 ARGB fans adjust their speed according to the current needs of the system, allowing you to effectively manage airflow and reduce power consumption. When the product is on standby, they maintain a low speed, which helps save energy.
