

Hobbywing ESC Bluetooth OTA Programmer

Hobbywing ESC Bluetooth OTA Programmer

Ref: 6938994400398

Hobbywing OTA Programmer HW30850400

The Hobbywing OTA Programmer allows you to conveniently adjust the parameters of your ESC and access data related to its operation in real time. It wirelessly connects to your smartphone via Bluetooth. The dedicated HW Link app is user-friendly and makes using the device extremely easy. At the same time, the module is lightweight and handy. It is also distinguished by its wide compatibility with various types of brushless regulators.

Discover the capabilities of the HW Link application

With the Hobbywing programmer you can easily connect your controller to your smartphone wirelessly. To gain access to all the useful functions of the devices, install the latest version of the HW Link app. The intuitive interface allows simple and convenient parameter adjustment. Now your ESC can work exactly the way you want it to!

Real-time data recording feature

This is not the end of your possibilities! The OTA programmer records power system status data in real-time and stores it in its memory. To access them, simply launch the HW Link app. The operating range of the device is up to 5m - enough to give you the freedom you

dream of. Note: to use real-time data recording, choose a controller that supports this feature.

Easier and faster ESC software updates

No longer do you need to connect your devices to your computer to update the firmware. The Hobbywing programmer allows you to perform ESC updates from within the HW Link app. All you have to do is reach for your phone! This makes it even easier to download the latest firmware version and save time.

Trouble-free Bluetooth connection

The OTA programmer connects to your phone via Bluetooth. That means it doesn't interfere with Wi-Fi or cellular data. It also does not affect the network requirements of other applications. So when using the Hobbywing programmer, you can use your smartphone and access the internet without any problems.

Lightweight, portable, practical

The device was designed to provide you with maximum convenience of use. Lightweight and handy - its storage and transport will not cause you any problems. You can easily fit it into your bag or backpack and take it anywhere you need. The module is also equipped with a small RESET button, with which you can quickly restore the factory settings.

Wide compatibility - many possible applications

The product is distinguished by its wide compatibility, which gives you a lot of possible applications. It works perfectly with selected models of brushless ESCs from the XERUN, EZRUN, PLATINUM and SEAKING series. To make sure if your specific controller supports the OTA programming module, check its technical specifications, which you can find in the user manual or on the official website.
