

Polarized cycling glasses Rockbros 10003 (black)

Ref: 5905316145610

Polarized cycling glasses Rockbros 10003 (black)

Cycling glasses, polarised Rockbros 10003

The Rockbros 10003 glasses are perfect not only for cycling, but also for running and other outdoor activities. They are equipped with polarised lenses and are extremely lightweight. They provide reliable UV400 protection and prevent eye fatigue. They also guarantee better visibility. The set also includes interchangeable lenses in different colours, a headband and a goggle cord.

Improved design

The lenses and frames of the goggles are made of durable PC plastic, making them very robust and resistant to damage. The accessory is also extremely lightweight, weighing only around 29g. What's more, the clever design reduces drag for even greater comfort when riding. Also noteworthy are the adjustable rubber nose pads and non-slip temples, which ensure that the goggles do not slip off the face.

5 lenses included

The set includes 5 types of lenses in different colours and shades - grey, clear, yellow, blue and tinted. This allows you to adapt the glasses to your needs and current weather conditions. However, this is not the end of the facilities. All lenses provide protection against harmful blue light (up to 400nm) and UV radiation (UVA, UVB and UVC).

Additional accessories included

The kit includes not only replacement lenses, but also a goggle cord and headband. This allows you to use the accessory exactly the way you want! You will also find a special cleaning cloth in the package. What's more, the dedicated case will make it easy for you to transport and store your glasses - don't worry about damaging them!
