Smartwatch Mibro Watch T2 Deep Blue

Ref: 6971619678727

Mibro Watch T2 Light Smartwatch (Deep Blue)

Get uninterrupted access to notifications with the Mibro Watch T2 Light. The smartwatch offers various features you can use on a daily basis. At your disposal are Bluetooth connectivity, health monitoring, GPS and much more. In addition, it is 2ATM water-resistant and offers 105 sports modes, so there is something for everyone. Check out what else it can surprise you with!

Bluetooth 5.3

Enjoy the reliable performance of the Watch T2 Light. The smartwatch is equipped with a dual Bluetooth 5.3 chip, which translates into a stable connection between your smartphone and the watch. What's more, it provides lower power consumption and improves the operation of the 2.5D GPU by 80% thereby guaranteeing smooth operation of the device.

Receive phone calls

The smartwatch offers Bluetooth connectivity, so you can quickly and conveniently answer your phone when you're at the gym, at work, etc. You can also reject an incoming call by sending an SMS message to the number. Note: the feature is available for smartwatches running Android 6.0 or later.

AMOLED HD display

With the Mibro Watch T2 Light, you gain convenient access to notifications. The smartwatch features a 1.75" AMOLED HD display with a resolution of 390 x 450. What's more, 340 PPI provides a wide color gamut, so the image is clear and detailed. You can also set one of the many available screensavers. In addition, various dial designs are available in the app to personalize the look of the watch.

GPS and barometer

The smartwatch has built-in GPS and supports Beidou, GLONASS, Galileo and QZSS. As a result, it provides your location with high accuracy and allows you to record the route you take. What's more, the high-quality, 6-axis sensor of the BOSCH-BMI270A accurately records every movement when you move your wrist. The barometer, on the other hand, measures your current altitude and pressure - perfect for climbing.

Sleep monitoring

The smartwatch offers a sleep monitoring function, during which it records data on your sleep phases, such as REM, or nap. It then generates a report with information such as sleep length or quality. This will help you get to know your biological clock better and eliminate bad habits.

Taking care of your health

The smartwatch will help you take even better care of your health. The built-in 4PD matrix sensor accurately measures your heart rate around the clock, blood saturation every hour and stress levels, and offers breathing exercises. What's more, it provides a menstrual calendar function and tracks the various phases of your cycle.

105 sports modes

Do you lead an active lifestyle, or do you want to increase the effectiveness of your workouts? If so, the Mibro Watch T2 Light will certainly come in handy for you. The smartwatch offers as many as 105 sports modes - swimming, yoga, tennis, running, basketball and more are at your disposal. There is something for everyone. The smartwatch also generates workout reports and displays tips, so you can monitor your progress and customize your exercise even more.

Waterproof and comfortable

Workout without worry even in the rain. The smartwatch is 2ATM water resistant, so you can successfully wear it during intense workouts. However, do not use the watch while diving, surfing, etc. The Mibro Watch T2 Light is also comfortable and will not cause any discomfort while wearing it. You can also choose from 2 types of straps: leather and silicone, so you can choose the right one for you (the kit includes a silicone strap).

Even more additional features

Forgot your keys or door card? With the Mibro Watch T2 Light, it's not a problem. You can use the smartwatch to open the door quickly and conveniently, just by bringing the watch close to the door. Note: the feature is available for NFC-enabled devices, and up to 3 access cards can be assigned to the watch. The product also allows you to check the weather forecast, manage the music player, turn on the alarm clock or stopwatch, and much more.

Long working time

Use the smartwatch freely without worrying about sudden drainage. The watch has a long-lasting battery that allows for about 10 days of operation for daily use. However, if you use the GPS function, the operating time reaches 15 h, and when listening to music about 4.5 h. On the other hand, the smartwatch remains in standby mode for 45 days. The battery percentage indicator will allow you to monitor the battery level in real time and renew the energy in time - charging will take about 3 h.
