Ref: 5905316149922

4 filters ND8+ND16+ND32+ND64 Sunnylife for Pocket 3

4 Sunnylife ND8+ND16+ND32+ND64 Filters for Pocket 3

A set of ND (Neutral Density) filters is the key to achieving excellent results in a variety of lighting conditions. Made of professional optical glass from Germany, they guarantee image clarity and transparency. Thanks to their magnetic design, mounting them will not be a problem, and the included case will make storage easy.

Precise control of light

The ND8 (Neutral Density) filter is ideal for use in moderate light, helping to control the amount of light reaching the camera. The ND16 filter is suitable for more challenging lighting conditions, allowing for smoother movements and dynamic shots. Meanwhile, the ND32 and ND64 filters will work well in extreme conditions, eliminating excess light and allowing you to use long exposure times even in bright sunlight.

High quality workmanship

Sunnylife filters are a guarantee of the highest quality. They are made using professional German optical glass, which is coated with a special coating to prevent scratches and leave dirt. The magnetic design makes the installation and removal of the filters child's play.
