BrainBolt Genius Learning Resources EI-8436

BrainBolt Genius Learning Resources EI-8436 Memory Game
The Genius game serves as memory training. Additionally, it enhances hand-eye coordination and supports proper development of visual perception and alertness. It is suitable for children from the age of 7 and adults, including seniors as a preventive measure against dementia. It offers 5 modes, each providing various levels of difficulty. The game can also be played by 2 people simultaneously. There is also an option to mute the sound and repeat the round. Dedicated buttons facilitate operation.

Imitation Mode
In "Imitation" mode, the player's task is to remember the flashing of the red LED on the board and press it within 7 seconds. Initially, the number of illuminated LEDs is small, but it increases over time, up to 21. This challenge requires concentration and quick reaction, providing excellent fun for all age groups.

Play with Others
Enjoy the game together with a friend or family. BRAINBOLT® GENIUS can also be used by 2 people simultaneously. Players take turns guessing the position of red or blue LEDs. The winner is the person who first completes the first 5 rounds without errors. It's a great way to compete and find out who has a better memory among friends.

Sequence and Sequence Genius Modes
In the Sequence mode, the player needs to remember and then mark the sequence of appearing LEDs. Sequence Genius, on the other hand, is an advanced version of the previous mode, which also requires matching the colors of the LEDs - for this purpose, the player must touch a given LED several times until the correct color appears. These are modes that develop observation and memory skills.

Lights Out Mode
In Lights Out mode, 2 LEDs will light up at the same time, and then one of them will go out for a moment. The player's task is to find the missing tile that was not illuminated for the second time. With each level, the game becomes more difficult as one additional missing tile appears, requiring even more attention and alertness.

Solitaire Mode
In "Solitaire Mode", the player's task is to click on 21 tiles, while avoiding pressing any of them for the second time. When one LED lights up, the player must press it once within 3 seconds. If the same LED lights up again, it must be pressed twice. This challenge involves remembering which tiles were previously illuminated, making the game progressively more difficult. It's a perfect way to train memory and concentration.

Manufacturer
Learning Resources
Suitable for
children 7+
Number of Players
1-2
