DDPAI N5 Dual video recorder

The DDPAI N5 Dual 4K Radar video recorder is an advanced device that combines cutting-edge technology with practical features to provide the highest level of safety and comfort while driving. Equipped with two 4K UHD cameras on the front and 1080P on the rear, it offers unparalleled image quality for detailed recording of all traffic incidents. Additional features, such as built-in GPS and a power management system, make this model a reliable tool for everyday driving.

Picture in excellent quality

The DDPAI N5 Dual is a unique combination of modern technology and functionality. The device offers the ability to record in 4K UHD resolution on the front and 1080P on the rear, which guarantees crystal clear images from both perspectives. With two cameras, front and rear, the DVR provides a full and detailed view of the traffic situation, which is crucial for safety and possible analysis of traffic incidents.

Technologies to support safety

The N5 Dual uses advanced technologies such as NightVIS and Realcube to provide clear and sharp images even in low-light conditions. This can help you feel safer while traveling at night. The wide 140° viewing angle allows for even better road coverage and increases driving safety by minimizing blind spots. On the other hand, the built-in GPS system records detailed route data, such as travel time,

speed, which can be helpful in many traffic situations.

Your personal travel assistant

The ADAS (Advanced Driver Assistance Systems) technology in the DDPAI N5 Dual video recorder acts as a personal assistant to the driver, increasing safety while driving. The system uses sensors to monitor the vehicle's surroundings and provide key alerts about potential hazards on the road. Features such as a vehicle start alert for the vehicle in front of you and a driver fatigue alert are invaluable on long trips, helping you stay alert and respond appropriately to changing traffic conditions. By using voice commands, ADAS not only improves safety, but also greatly simplifies the operation of the device, allowing the driver to focus on the road.

Long-lasting and reliable operation

The DDPAI N5 Dual is equipped with a supercapacitor, which ensures greater resilience and longevity of the device even in extreme temperatures. This makes the DVR more resistant to overheating and other adverse conditions. In addition, the IPS intelligent power management system protects the vehicle's battery from excessive discharge.

Ease of use and modern technologies

The device offers ease of use with features such as voice control (supported only in English), which allows you to perform commands such as taking a photo without taking your hands off the wheel. A stable Bluetooth and Wi-Fi connection ensures fast and seamless communication with the DDPAI app, making it significantly easier to manage recordings and settings.

Included

N5 Dual
Rear camera
Car charger
Power cable (front)
Power cable 5.5 m (rear)
Ballast
User manual
3M adhesive x 2
Electrostatic sticker x 2
