Aigo AR12 PRO computer fan

The Aigo AR12 PRO fan provides outstanding ARGB lighting effects and efficient cooling, being an excellent choice for users who are looking for a combination of performance and aesthetic design. Adapted to work with the most popular computer case sizes, it not only provides significant airflow and quiet operation, but also adds style with dynamic lighting effects that can be synchronized with the computer's lighting system.

ARGB lighting - harmony of light

With its integrated ARGB lighting, the AR12 PRO adds style to any case, offering synchronization with other computer components for a consistent lighting effect. The multi-colored, bright LEDs provide a spectacular display that will enliven any gaming or computing experience.

Efficiency and quiet operation

Improved fan blade design minimizes noise to 28.6 dBA at a maximum speed of up to 1600 RPM. The state-of-the-art design with hydraulic bearings ensures not only cooling efficiency, but also long-lasting smooth operation.

Innovative damping system

The AR12 PRO PWM fan is designed to reduce vibration and resonance, which is achieved with the help of soft damping pads placed on both sides of the fan. This ensures comfort and more silence even at high speeds.

Durability and reliability

Aigo guarantees long and trouble-free operation of the AR12 PRO fan, all thanks to its hydraulic bearings and durable construction. This product is the ideal solution for those looking for both visual effects and a reliable component for cooling their system. Provide your computer with optimal operating temperature and a unique look!
