

Filter Freewell Glow Mist 1/4 M2 Series 77mm

Filter Freewell Glow Mist 1/4 M2 Series 77mm

Ref: 6972971863875

Glow Mist 1/4 Freewell M2 Series 77mm Filter.

Create exceptional shots with impressive quality. The Glow Mist 1/4 filter gently reduces contrast and creates a soft glow around light sources. What's more, a lens hood with a convenient grip protects the lens from debris and damage, and a magnetic adapter allows you to easily mount the filter. In addition, a dedicated case makes it easy to store the product.

Various usage scenarios

The Glow Mist 1/4 diffusion filter allows you to achieve the effect of subtle blurring of the image - thus avoiding the effect of an overly sharp, unnatural image. The product reduces contrast to a low degree and creates a subtle glow around the light source. As a result, the tonal range of the image is wider, and transitions between light and dark areas appear smoother.

Refined design

The Freewell filter is made from German optical glass and was created using a multi-layer coating process, which not only provides excellent scratch protection, but also unparalleled image quality. It is waterproof, dustproof and oilproof, ensuring reliability even in the most demanding conditions.

Quick and easy installation

Indulge in quick filter changes and don't worry about missing the perfect shot. The magnetic system allows you to change filters in the blink of an eye. Forget about the tedious tightening and unscrewing of filters. It only takes one second to apply a new filter. Thanks to the increased magnetic force, the mount is reliable, which means you can concentrate on creating great shots without worrying about stability.
