Magnetic filter Freewell V2 Series VND/CPL 3-7 Stops

Freewell V2 Series magnetic filter VND/CPL 3-7 degrees

The Freewell V2 Series Magnetic Filter is a tool designed to meet the most advanced photographic needs. Its hybrid design combines the functionality of a variable gray filter (VND) with a range of 3-7 degrees (equivalent to ND8-ND128) and a polarizing filter (CPL). This allows not only fine-tuning of exposure, but also reducing unwanted reflections and increasing color saturation. This makes the filter indispensable in a wide range of lighting conditions, from full sun to overcast skies. Included with the filter you get a practical case and protective covers with which to safely store the accessory.

Compatibility without limits

The V2 filter's exceptional functionality comes from a thoughtful design that takes into account the forward-thinking needs of photographers. Supplied with 82mm adapters, the filter can be easily adapted to work with lenses from 49mm to 77mm in diameter with optional adapters. The magnetic attachment mechanism ensures instant and solid attachment to the lens, which is crucial in situations that require quick response and setting changes.

Robust construction

The high optical quality of the V2 filter has been achieved through the use of premium optical glass, manufactured in Germany, and an advanced multi-layer coating process. The result is a filter that is resistant to scratches, water, dust and grease, ensuring image clarity

and durability in all conditions.

Included
