

Robot vacuum cleaner Midea M7

Robot vacuum cleaner Midea M7

Ref: 6956079710187

The Midea M7 Cleaning Robot

This product from Midea is a 2 in 1 device. It offers the function of vacuuming and washing the surface, allowing you to save time. The motor running at 55W and suction power up to 4000Pa allow the effective elimination of various types of contaminants - from dust to hair and hair. The LDS laser technology creates an accurate map of your home, without skipping or repeating your route. The M7 also overcomes obstacles up to 20mm high and can run for up to 150 minutes on a single charge - enough to vacuum up to 250m² of floors in total. What's more, the robot's dust container can be washed under running water.

Surfaces free of dust and stains

The M7 thoroughly cleans your floor, removing stains and allergens. What's more, you can also set the water dosage yourself from Low to High depending on the type of surface to be cleaned. Don't worry about streaking or damaging your floor!

Effective against dirt

The machine has a Nidec brushless motor of 4000Pa, which makes it one of the most powerful vacuum cleaners on the market! It is also equipped with new software and algorithms, for increased productivity. It effortlessly picks up hair, dander, or dust. You can also vary the suction power, choosing from modes like Silent, Soft, Standard and Max.

Increases power when cleaning carpet

It automatically increases the suction power to Max to thoroughly remove the dust in the carpet fibers. The V-shaped brush design prevents hair from getting caught in the brush and is also ideal for cleaning delicate surfaces. In addition, the side brushes scrape dirt from crevices, leaving the surface spotlessly clean.

LDS laser navigation system

Robot uses LDS navigation, which allows you to create a precise plan of the apartment. As a result, the device does not move randomly through the rooms, but along a route created by them, on which it does not miss a single centimeter and does not repeat cleaning in the same areas. In addition, M7 can also work in the dark.

Intelligent sensors

The use of anti-collision sensors allows M7 to avoid obstacles and move freely on any surface. So you don't have to worry about the robot falling down the stairs or bumping into furniture. What's more, if the battery gets low during cleaning, the device will find a charging station to recharge itself.

Control M7 operation remotely

The app allows you to use your M7 to its full potential. For example, you can select the area to be cleaned or plan the sequence of rooms to be vacuumed. It also remembers the floor plan of several floors, so it is suitable for larger homes. Your kid is asleep and you don't want to wake him up? Set a virtual wall to exclude the selected surface from cleaning. The robot is also compatible with the Amazon Alexa assistant, so you can operate it with voice commands.
