

Speed and Cadence Sensor Coospo BK467 compatible with Wahoo

Speed and Cadence Sensor Coospo BK467 compatible with Wahoo, Garmin, Bryton etc.

Ref: 5906168434280

Coospo BK467 cadence and speed sensor

Meet the Coospo BK467, an advanced cadence and speed sensor that, thanks to ANT+ and Bluetooth technology, wirelessly transmits your speed or cadence data to compatible bicycle computers, or apps. The BK467 is the ideal tool for monitoring your riding performance, offering precise real-time data and easy installation.

Bluetooth and ANT+ connectivity

With dual Bluetooth and ANT+ technology, the BK467 allows you to connect and display data on GPS cycling computers and works with most popular cycling apps such as CoospoRide, Zwift, Rouvy, RidewithGPS, Peloton, Openrider, TrainerRoad and many others. This provides versatility and convenience during workouts.

Training with the CoospoRide app

When connected to the CoospoRide app, real-time cadence or speed data will be displayed directly on your phone as you ride. This is ideal for cyclists who want full control over their workouts.

300 hours of battery life

The BK467 is equipped with a replaceable CR2032-type battery that provides up to 300 hours of operation. That's a long runtime,

allowing you to enjoy long training sessions without having to change batteries frequently.

IP67 water resistance

Thanks to its IP67 certification, the BK467 is splash and rainproof, which means you can train without worrying about weather conditions. The reliability of the BK467 makes it the perfect companion in any conditions.

Cadence or speed tracking

The BK467 uses an advanced proprietary algorithm to track and record accurate cadence or speed data in real time. You can easily switch modes between speed and cadence measurement - just reset the battery and the blue light will indicate cadence mode. The red light will indicate the speed mode.

Ease of use

The BK467 is extremely easy to use. At only 13.80mm thick and weighing only 9.2g, it is not only lightweight, but also does not require magnets, making it compatible with most bikes and frames. Simply mount the BK467 and start riding.

Included

- Speed/cadence sensor x1
- Rubber pad (flat x 1, curved x 1)
- Silicone eraser (large x 2, medium x 2, small x 2)
- User manual x 1
