

Smart Hub Sonoff RF BridgeR2 433MHz

Smart Hub Sonoff RF BridgeR2 433MHz

Ref: 6920075776560

Smart Hub Sonoff RF BridgeR2 433MHz

Now you can manage your smart home even more easily and conveniently. BridgeR2 allows you to connect remote controls, sensors and other 433 MHz RF devices to your Wi-Fi network. Thanks to this, you can easily control them all from the application! You can also create smart scenes and timers, and even control your equipment with voice commands - compatibility with Google Assistant and Amazon Alexa makes this possible. The control panel can be paired with up to 16 devices and stores up to 64 433MHz codes. It also works with the Samsung SmartThings platform, among others.

More convenient operation of your smart devices

With the Sonoff smart hub, you can easily turn your devices that communicate via 433MHz radio transmission into equipment that uses a Wi-Fi connection. You can easily add them to the user-friendly eWeLink application. The product is compatible with a variety of RF switches, RF sockets, RF controlled light bulbs, and RF sensors, among others. You can pair it with 16 devices. One remote with 4 buttons allows you to operate 4 devices, which means that BridgeR2 allows you to add up to 64 appliances to the app!

Create smart scenes

Pair the smart hub with your choice of remote controls, sensors or other devices to gain the ability to create smart scenes. Make the heater turn off automatically if someone opens the window, and turn off the lights throughout the house when you press a button on the

remote control. With Sonoff you can also take care of safety in your apartment. How to do it? For example, if someone enters your home, you can immediately receive a notification on your phone and the light will automatically switch on.

Set selected timer

Customize your smart home to fit your lifestyle. The BridgeR2 smart hub allows you to set up to 8 different types of timers simultaneously. For example, you can make the lights come on at a certain time every day and go off after a certain amount of time. Do you want the heater or fan to automatically switch on and off for example every 10 minutes? That is also possible! Just set the timer so that it runs in a loop.

Control your devices by voice

Have your hands busy cooking, but need to turn on the light? Need to close the blinds, but don't want to get out of your comfortable bed? It's not a problem anymore! The smart hub is compatible with Amazon Alexa, Google Assistant and Alice voice assistants, which means you can control your paired devices with simple commands. With just a few words, you can turn on the lights, open the blinds or turn off the fan - see how convenient it is!
