

Lamp LED Neewer MS150C RGB 150W 2700-6500K

Ref: 6976831838300

Lamp LED Neewer MS150C RGB 150W 2700-6500K

Neewer MS150C RGB 150W 2700-6500K LED lamp.

The Neewer MS150C LED lamp will meet the needs of filmmakers, photographers and content creators. The device combines RGBWW light mixing technology with precise PWM dimming for accurate color reproduction. With a light output of 150 watts and a variety of modes, the product will prove reliable for both studio and outdoor work. In addition, the LCD display allows for convenient adjustment of settings.

Advanced light mixing technology

The Neewer MS150C uses RGBWW technology, offering color temperatures ranging from 2700K to 6500K. As a result, it emits multiple colors and reproduces them realistically, as evidenced by its CRI97+/TLCI98+ rating. PWM dimming provides precise brightness adjustment from 1% to 100%, allowing you to fine tune your lighting.

Compact design for filming

The unit is lightweight and compact - it weighs 1,041 grams and measures 195 x 95 x 92 mm, making it effortless to transport. The 180° adjustable mount and aluminum housing make the MS150C perfect for outdoor use, and the included Bowens adapter allows you to connect a variety of light modifiers.

Realistic special effects

The unit offers 6 operating modes, including CCT, which provides a color temperature range of 2700K-6500K and GM color correction of -50/+50, and HSI, which allows for 0-100% color saturation and 360° color angle adjustment. RGBCW is also available, allowing individual adjustment of red, green, blue, cool and warm white hues. In addition, FX offers 17 special scenes, SOURCE allows you to collect and use colors, and GEL provides 40 color gel presets.

Various control methods

You can control the lamp in 3 ways - using the buttons and knobs on the housing, through the NEEWER APP with Infinity technology, allowing you to control hundreds of lamps, and through the 2.4G system, allowing you to control lamps of various models, including the Neewer SL90, RGB1, CB60RGB, RGB1200, PL60C, MS150B, BH30S and FS150B at a distance of up to 15 meters. The choice is yours!

Reliable power supply

The lamp can be powered directly from an outlet, as well as with a V mount battery (16.8V) and a D-Tap cable, providing convenient power in the field. However, it is worth remembering that when using a rechargeable battery, the unit's power drops to 95 watts and cannot be charged while in use.

3 heat dissipation modes

You don't have to worry about potentially overheating the lamp. The 3 heat dissipation modes of Intelligent, High Speed and Low Speed effectively keep the temperature at an optimal level.
