Brushless motor Hobbywing QuicRun 3652SL G2 4000Kv - black

QuicRun 3652SL G2 4000Kv - black

The QuicRun 3652SL G2 4000Kv brushless motor is an advanced drive unit designed for RC models, offering high power and precise control. The AC-type motor features an RPM per volt ratio of 4000 RPM/V, enabling very high speeds. Compatibility with Li-Po batteries (2-3 cells) allows flexibility in power supply selection, and the 5.3 A idle current ensures energy efficiency. The motor has four poles, resulting in smoother and more stable operation. Its compact dimensions (36 mm in diameter, 52 mm in case length) and 3.175 mm diameter, 15 mm long shaft make it easy to install in various RC models. The weight of 224 g ensures adequate stability and durability. Thanks to the absence of a Hall sensor and a fixed ignition advance angle of 0°, the motor's design is simplified, which increases its reliability and facilitates maintenance.
