Motor Hobbywing QuicRun 2435SL G3 6500Kv - black

QuicRun 2435SL G3 6500Kv - black

Hobbywing's QuicRun 2435SL G3 6500Kv brushless motor is a high-performance drive unit designed for RC models that require high power and precise control. It features a RPM per volt ratio of 6500 RPM/V for exceptional acceleration and high speed. Compatibility with Li-Po (2-cell) batteries enables longer runtime and a wide range of applications. The motor has an idle current of 3.4A and four poles, which translates into efficiency and reliability. Its compact dimensions (24 mm in diameter and 36 mm in case length) and shaft with a diameter of 2 mm and length of 12 mm make it easy to install in various RC models. The light weight (61.2 g) minimizes the additional load on the model. The absence of a Hall sensor and a fixed ignition advance angle of 0° simplify construction and operation, while ensuring high performance.
