CR-PETG Filament Creality (Transparent blue)

Ref: 6971636409601

CR-PETG Filament Creality (Transparent blue)

Creality CR-PETG Filament (Transparent Blue)
Creality's PETG filament combines the advantages of PLA and ABS filaments. It is environmentally friendly and not prone to distortion, while enabling smooth and precise printing. It is also distinguished by its high strength and resistance to moisture, and its surface is eye-catching with a beautiful sheen. What's more, CR-PETG filament is compatible with most FDM Creality printers.

High quality manufacturing
Thanks to the use of environmentally friendly PETG plastic, the filament is very durable and does not emit unpleasant odors. It also features a uniform diameter and resistance to moisture, distortion and cracking. In addition, its tensile strength reaches 49 MPa. An additional advantage of the filament is its beautiful, glossy surface - it is perfect for printing figurines and decorations, for example!

Smooth printing
The filament allows smooth, fast and precise printing - without wrinkles and bubbles on the project. At the same time, it guarantees perfect flow and minimizes the risk of clogging the printer nozzle. So you can print your models without any problems and save precious time!
