

## Thunderrobot K87Wired Mechanical Keyboard Red switch

Ref: 6932066312138

Thunderrobot K87Wired Mechanical Keyboard Red switch

Thunderrobot K87 red switch mechanical keyboard

Meet the Thunderrobot K87 mechanical keyboard, which combines advanced technology and perfect workmanship. It guarantees precise registration of every click, even when they occurred simultaneously. Ergonomically designed concave keys provide comfort and confidence that your fingers will rest securely on the keys. In addition, the ability to swap switches and support for 3-pin versions gives you full freedom to customize the keyboard to your needs. The grease- and scratch-resistant surface of the keys, combined with the non-slip feet, make the Thunderrobot K87 not only functional, but also durable. And if you add elegant backlighting and practical keyboard shortcuts, you get a device designed for the most demanding users.

Unique precision and responsiveness

When every click matters, you need a keyboard that won't disappoint. Thanks to its simultaneous click reading technology, the Thunderrobot K87 ensures that no command is missed. What's more, the keys feature red switches that are responsive at just 45g of pressure and have a precisely balanced action distance. This combination guarantees lightning-fast response and precise operation during intense gaming sessions or work.

Ergonomic shape

The keyboard is comfortable to use. It has been profiled according to the cherry alignment to ensure comfort during typing and gaming.

The ergonomic, concave shape of the keys makes your fingers naturally fit on them. In addition, the surface of the keys is resistant to grease and scratches, keeping the keyboard in fantastic condition for a long time.

#### Adapted to individual needs

Thunderobot K87 is not limited to just one type of switch. If you want to change the typing or gaming experience, you can replace the switches with the included tool and spare switches. The keyboard also supports 3-pin switches and dummy switches, which provide better stability for wide keys and partially reduce noise.

#### Backlighting and keyboard shortcuts

The backlighting of the Thunderobot K87 keyboard is not just a matter of aesthetics, but also functionality. It offers as many as 8 different modes, which you can change in just a few seconds thanks to a combination of the Fn key and keys 1 through 8. Thus, depending on your mood, needs or task at hand, you can adjust the color scheme and style of the backlighting to your liking. But that's not the end of the keyboard's capabilities - the Thunderobot K87 is also equipped with practical keyboard shortcuts. They allow you to quickly change the game mode (FPS and CF) and instantly access the record and end recording functions. This saves you valuable time and gives you an edge over your rivals without interrupting your gameplay or work.

#### Height and tilt

The K87 also has rubber folding feet, which make it possible to use it as you wish at two tilt angles. Flat, the keyboard case is 23.5mm high smoothly descending to 17.5mm.
