

Intelligent LED TV strip Avatto SLS06 55-65'

Ref: 6976037361350

Intelligent LED TV strip Avatto SLS06 55-65'

Avatto SLS06 55-65' Smart LED TV Tape.

The Avatto SLS06 Smart LED Tape is a state-of-the-art lighting solution designed to enhance the visual and audio experience. With integration with smart home systems such as Alexa and Google Home, and support for the Tuya app, it offers full control and personalization of the lighting in your home. Ideal for games, movies and music, the LED strip provides an immersive experience by synchronizing lighting with video and sound.

Precision FPGA video processing

The LED ribbon controller captures the video signal transmitted via HDMI. Thanks to FPGA technology, the controller analyzes the image in real time, identifying the colors displayed on the screen for accurate reproduction and minimal latency. This allows gamers to enjoy smooth gameplay without annoying interruptions, greatly enhancing the gaming experience.

High HDMI performance

Support for HDMI 2.0b enables up to 4K resolution at 60 frames per second and support for YCbCr 4:4:4 and RGB. In addition, the maximum refresh rate is 240Hz at 1080P resolution. This means that dynamic scenes will be displayed smoothly and clearly, which is ideal for movie buffs and sports enthusiasts.

Easy installation and automatic recognition

Installation of the LED tape is simple and requires no specialized knowledge. Thanks to the automatic recognition function, the tape is ready for use almost as soon as it is plugged in. This saves time and eliminates the need for complicated settings, allowing you to quickly enjoy perfect lighting.

App and voice control

The Avatto LED strip can be controlled via the Smart Life or Tuya app, allowing full control from a smartphone or tablet. Integration with Amazon Alexa and Google Home allows for convenient voice control, enhancing your experience and allowing you to easily change settings hands-free.

Multiple modes and scenes

The Avatto SLS06 offers various lighting modes, including music mode, video mode and wide screen mode. In addition, 12 scenes are available, such as romantic, colorful or dreamy, allowing you to customize the lighting for any occasion or mood, creating the perfect atmosphere at any time.

Synchronization with music and sound

A built-in microphone in the control box allows the lighting effects to be synchronized with the rhythm of music and ambient sounds. This is ideal for events where the lighting dynamically responds to the music, creating an unforgettable atmosphere and enhancing the party experience.

Sharing and group control function

The Avatto LED strip allows you to share settings with family members, making it easy for each resident to manage the smart home. The group control function allows you to synchronize lighting in different zones, which is especially useful in larger spaces, ensuring consistent and harmonious lighting.

Integration with other smart devices

The Avatto LED strip can be connected to other smart devices in the home, allowing the creation of complex scenarios, such as exit mode or sleep mode. This versatile and advanced lighting solution significantly improves the comfort and functionality of daily life, making it more automated and enjoyable.

Included

- LED strip
- WiFi controller
- Data cable
- Clips for the cable
- Power adapter
- User manual
