

## Earphones TWS Soundpeats H1 (Black)

Earphones Soundpeats H1 (Black)

Ref: 6941213644947

### TWS Soundpeats H1 earphones

High-end sound, noise cancellation, and wireless charging are the main benefits of the H1. Soundpeats earphones feature Knowles armature drivers and 8.6mm dynamic drivers, which are responsible for great sound quality. The QCC chip and Bluetooth 5.2 offer a stable connection, and the low latency increases the dynamic range of the game. In addition, 4 noise-canceling microphones will allow you to talk freely on the phone. There's also charging for the H1 with a USB-C cable (included) or an inductive charger (not included).

### Excellent sound and comfort

High-end H1 earphones surprise you with impressive sound quality thanks to Knowles armature and 8.6mm dynamic drivers. They are designed for long-term use, so you don't have to worry about feeling uncomfortable.

### Hear what you want

The earphones feature Comply memory foam pads that dampen outside noise. This, combined with cVc 8.0 passive noise cancellation, provides unparalleled comfort when talking on the phone. The result is a noise level of 28 dB, and you only hear what you want to hear.

### Long runtime and wireless charging

H1 can run for about 10 h on a single charge, while the case offers another 30 h of playback. What's more, you no longer have to worry

about suddenly discharged earphones. Inside the case, there are 4 indicators that will inform you about the battery status. In addition, the charging case will allow you to renew the power of H1 up to 6 times, and you can charge them with a USB-C cable (included) or by using a wireless charger.

#### Ultra low latency

With e-sports enthusiasts in mind, Soundpeats has equipped the H1 with a low latency of 60ms. Tap the earphones three times to activate the mode and immerse yourself in the gaming world.

#### Stable connection

The earphones support Bluetooth 5.2 and the aptX codec, which ensures stable and fast signal transmission without interference. The accessory is also compatible with Bluetooth 4.0 devices. Equipped with mono and stereo modes, you can use one earphone or two.
