Creality Halot-Mage S 3D Printer

Creality Halot-Mage S 3D Printer
The Creality Halot-Mage S 3D printer is an advanced device that stands out for its incredible precision and printing speed, ideal for the most demanding users. With a 10.1-inch LCD screen with 14K resolution and an advanced lighting system, the Halot-Mage S provides incredible print accuracy, perfectly reproducing even the smallest details of jewelry and miniatures. Combined with the intuitive HALOT OS operating system, the printer offers full control and flexibility over your projects, making 3D printing simpler and more efficient than ever.

LCD screen
The Creality Halot-Mage S features a large 10.1-inch LCD screen with an impressive 14K resolution (13320x5120 pixels). Such a screen allows for larger and more detailed models to be printed, which is crucial when creating precision pieces such as jewelry or miniatures. The high resolution guarantees the sharpness and accuracy of each print, minimizing the need for additional processing.

Unified lighting system
The Halot-Mage S printer uses the state-of-the-art Integral Light Source 3.0 lighting system, which provides uniform illumination with over 90% uniformity. Such a system results in better print quality and model consistency, eliminating imperfections due to uneven lighting. As a result, each print is accurate and faithfully reflects the design.

"Dynax" mode for greater speed
The closed-loop motor and dual linear guides allow printing in "Dynax" mode at speeds of up to 150 mm/h. This means that the printer is able to create models up to 3-4 times faster than traditional 3D printers, while maintaining high print quality. This is ideal for those who need to complete their projects quickly without compromising on quality.

Effortless model removal
The three-layer "Pictor" film is durable and capable of reducing peel force by 35%, making it easy to remove finished prints. This makes the printing process more efficient, and the risk of damaging models during removal is greatly reduced.

Intelligent operating system
The HALOT OS operating system allows you to remotely control the printer using a smartphone or computer. You can easily monitor the printing process and download files directly from the Creality Cloud model library. This not only adds convenience, but also allows you to manage your projects more efficiently.

Air purifier for your comfort
The Halot-Mage S printer is equipped with an automatic air purifier that effectively removes resin odors. The built-in activated carbon filter makes the working environment more friendly, and users can enjoy printing without unpleasant odors.

Included
Printing platform ×1
Resin tankx1
3D printer x1
U disk x1
Power cable x1
Paper funnel
Removable film x1
Plastic blade ×1
Screwdriver set x1
Metal blade ×1
Calibration card ×1
Ventilation tube ×1
Lubricant ×1
