Hobbywing QuicRun 3660SL G2 3150Kv motor - black

The Hobbywing QuicRun 3660SL G2 3150Kv brushless motor is a high-performance drive unit designed for RC models that provides high power and precise control. The AC-type motor has a RPM per volt ratio of 3150 RPM/V, allowing it to achieve high speeds at the right voltage. Compatibility with Li-Po batteries (2-3 cells) allows flexibility in power supply selection, and an idle current of 5.4 A indicates high energy efficiency. The motor has four poles, which translates into smoother and more stable operation. Its compact dimensions (36 mm in diameter, 60 mm in case length) and a shaft with a diameter of 5 mm and a length of 18 mm make it easy to install in various RC models. Its weight of 273 g provides adequate stability and durability. The absence of a Hall sensor and a fixed ignition advance angle of 0° simplify the motor's design, which increases its reliability and facilitates maintenance.
