Anti Bark Training Collar with remote control for Dogs Petsuper PA02

Electric bark collar with remote control Petsuper PA02

The Petsuper PA02 electric bark collar with remote control can prove to be an invaluable support in training your pet. It allows you to choose from three training modes and is distinguished by its IP67 water resistance. At the same time, it is fully safe and comfortable for pets. What's more, the included remote control features a range of about 488 meters and allows you to control three collars simultaneously.

Fast charging and long battery life

The Petsuper PA02 collar is equipped with a state-of-the-art fast charging system, so you can get back to training your dog in no time without worrying about interruptions in use. In addition, the powerful battery makes the device work in standby mode for up to 20 days - don't worry that it will refuse to obey you too soon.

Adaptation to different dog breeds

The adjustable strap of the collar allows you to adjust its length to suit dogs of different breeds. What's more, the device is ideal for pets weighing from about 3.6 kg to as much as 50 kg. Regardless of whether your pet is small, medium or large, the product will ensure that it is comfortable to wear while effectively performing its function.

Practical remote control included

The included remote control is intuitive and easy to use, allowing you to quickly and precisely control the collar. With an easy-to-read display and simple buttons, you can quickly switch between modes and check the most important information. What's more, you can easily operate up to three collars with one remote control. This is ideal for people who have several dogs!

Fast response and long range

With Petsuper PA02, you can be sure that the collar will respond immediately as soon as your dog starts barking - its response time is only about 0.1 seconds. In addition, the remote control's operating range of about 488 meters allows effective training both indoors and outdoors, giving your dog freedom of movement and you effortless control over his behavior.

Three effective training modes

The collar offers three training modes: sound, vibration and electric pulse. The first is ideal for the initial phases of training, the second helps correct more persistent behavior, and the third provides effective control in the most difficult situations. This allows you to customize the training method to suit your dog's individual needs. The PA02 also offers two anti-bark modes - manual and automatic. The manual mode allows the owner to manually control the collar, giving full control over the dog's behavior. The automatic mode, on the other hand, activates automatically when the pet starts barking.

IP67 water resistance

The collar is designed for active dogs who love to play outdoors, regardless of the weather. The IP67 waterproof rating ensures that the device is resistant to rain and moisture, so your dog can use it in almost any weather conditions.
