AR XREAL Air 2 Pro Glasses

Transform the way you experience reality. XREAL Air 2 Pro are innovative AR glasses that are perfect for gaming, work and more, thanks to their advanced display technology and unique features. Just put them on and you'll gain the ability to watch movies and play games on a huge virtual screen! The built-in SONY micro-OLED display provides amazing image quality and a wide 46° field of view, and the option to quickly switch between three levels of darkness (0%, 35%, 100%) allows you to adjust the equipment to different lighting conditions. An added bonus of the Air 2 Pro is its lightweight, ergonomic design that ensures comfort even with prolonged use.

Get caught up in the adventure

The XREAL Air 2 Pro glasses are equipped with a SONY micro-OLED display that features brightness of up to 500 nits, low power consumption and a refresh rate of up to 120 Hz. They also benefit from a patented optical engine that guarantees high resolution and perfectly reproduced colors, as certified by TUV Rheinland. With all this, you can enjoy the immersion of your dreams. Just put on the glasses and move into the world of thrilling virtual entertainment!

Adjustable blackout

Experience the magic with One-touch Immersion Control, which allows you to instantly switch between three levels of electrochromic dimming - 0%, 35% or 100%. So you can either use the glasses while staying in touch with the outside world, or completely cut off from

your surroundings and fully immerse yourself in virtual reality. All this means that the XREAL Air 2 Pro will perform well in all conditions and provide clear images even in bright light!

Experience amazing sound quality

XREAL Air 2 Pro will surprise you not only with excellent image quality, but also with amazing sound. The glasses are equipped with a new audio system that allows you to enjoy rich, detail-saturated surround sound. Hear every detail and fully immerse yourself in the virtual world - feel like you're in a movie theater in your own room or go on an adventurous trip with the characters of your favorite game. It doesn't stop there, though - Directional Audio technology reduces sound distraction, meaning those around you won't hear what you're doing. In addition, the Air 2 Pro offers two high-end microphones.

For the sake of your comfort

The Air 2 Pro minimizes the problem of flicker and harmful blue light emissions, making it completely safe for your eyesight. You don't have to worry about eye fatigue! Also noteworthy is the lightweight, ergonomic design of the glasses - their weight is only 75 g, and they are perfectly balanced and do not compress the nose. So you can easily use them even all day long, enjoying unsurpassed comfort.

Take your entertainment to the next level

Are you looking for additional capabilities? Try the separately available XREAL Beam adapter, which allows you to use selected Android apps, such as Netflix, for example. Now you can comfortably watch your favorite movies and series without the need for additional devices - just put on the glasses and in an instant you're transported to your private cinema room!

Compatible with many devices

The glasses are compatible with most devices equipped with a USB-C output port. This means they work seamlessly with smartphones, tablets and laptops, for example. What's more, if you buy an additional XREAL Beam adapter, you'll gain the ability to connect the Air 2 Pro to devices with Lightning ports and to selected gaming consoles, such as the Nintendo Switch, PlayStation 5 or Xbox X / S, for example.

More display modes with XREAL Beam

The Air 2 Pro supports the default Air Casting display mode, which provides a refresh rate of up to 120 Hz and a screen size of 130 inches. This makes it ideal for watching movies and playing games. However, you can unlock additional modes using the separately available XREAL Beam adapter. It allows you to choose from options such as Body Anchor (keeps the screen in one place regardless of head movements), Smooth Follow (minimizes image movement caused by external factors - for example, while driving) and Sideview (allows you to shrink the display and move it to the side, making it great for work that requires multitasking).
