

AR XREAL Beam goggle adapter

AR XREAL Beam goggle adapter

Ref: 6976143800286

XREAL Beam AR glasses adapter

Meet XREAL Beam, an innovative adapter for AR glasses that opens up new possibilities for enjoying augmented reality. Its advanced technology and versatility make it ideal for gamers, movie lovers and technology enthusiasts. Discover 3 new display modes and connect with more devices - with XREAL, the virtual world is open to you!

New display modes

XREAL Beam allows you to unlock three additional display modes with Spatial Display technology. Body Anchor mode keeps the screen in one place regardless of head movements - perfect for work and gaming. Sideview mode lets you shrink the display and move it to the side, minimizing distractions in your field of view while you can still enjoy your favorite content. Smooth Follow mode, on the other hand, minimizes image movement caused by external factors - especially useful when using glasses in vehicles.

The ultimate streaming and gaming experience

Beam enables wired connection via XREAL USB-C to USB-C or HDMI to USB-C cables for smooth gaming and streaming with minimal lag. It's ideal for gamers who need reliability and speed.

More than an adapter

XREAL Beam is more than a simple adapter - it's a portable entertainment center. With it, you can comfortably use your favorite apps from Android - from watching movies on streaming services to reading books. In addition, the built-in 32 GB memory will allow you to download an entire season of your favorite series - now you can easily prepare even for a long flight!

Convenient operation

Adjust the way you navigate to your preference by using the virtual cursor or directional keys. You can also easily choose from different display modes - Air Casting or Spatial Display (Body Anchor, Smooth Follow and Sideview) to match Beam to different usage scenarios.

Wide compatibility

Beam works with most devices equipped with USB-C or HDMI video output. This means you can successfully use it with laptops, smartphones, tablets and consoles such as Steam Deck, Nintendo Switch, ROG Ally, PlayStation and Xbox.

Long working time

With XREAL, you don't have to worry about the fun running out too quickly. A fully charged Beam can run for up to 3.5 hours. That's really plenty of time to watch movies or play games! What's more, the device supports fast charging with up to 27 watts, allowing you to charge it to 50% in just about 30 minutes. But the possibilities don't end there - you can also use the adapter when it's plugged in.
