Maono PD200XS Dynamic Microphone (black)

The Maono PD200XS microphone is the perfect choice for all gamers and streamers who appreciate excellent sound quality! The built-in dynamic microphone capsule with cardioid characteristic reliably removes annoying background noise, allowing you to get crystal clear sound. Its operation will not be a challenge for you, and the dedicated software will give you access to even more control over the microphone settings.

Your key to excellent sound

Discover professional sound quality with the Maono PD200XS! The microphone is capable of capturing the full spectrum of sound, from deep bass to soft treble to clear midrange. Its wide frequency range of 40Hz to 16KHz allows for crystal clear sound, whether you're recording music or conducting live broadcasts. What's more, it effectively eliminates unwanted background noise by focusing on your voice.

Full control at your fingertips

Even beginners can handle the operation of the microphone! It is equipped with a practical knob that allows you to both control the microphone sensitivity and adjust the volume of the connected headphones. What's more, with just one press of a button, you can instantly mute the microphone and avoid unwanted sounds during transmission or recording.

2 ways to connect

Maono PD200XS gives you full flexibility in terms of connection. You can connect it directly to your computer or laptop using the included USB cable. The microphone also has an XLR output, which allows you to connect it to professional audio interfaces, mixers or portable sound systems. It's ideal for podcasters and music producers who want the highest quality sound.

Increase your immersion level

Light up your station with colors! The Maono microphone features colorful RGB backlighting that gives it a unique gaming feel. This makes it easy to create a unique atmosphere during an exciting gameplay, recording session or streaming content! It offers up to 8 different colors, which you can change at will to suit your preferences. Intense red, calming blue, or maybe energetic green? The decision is up to you!

Even more possibilities

Want to gain access to additional features? Download the dedicated Maono software! Once it is installed, you can freely personalize the settings of the PD200XS microphone to perfectly suit your needs. Thanks to its intuitive interface, you can control the microphone's sensitivity, adjust the volume or choose from different EQ modes. With it, you can also change the colors and lighting effects of the RGB backlighting to create your own unique design.
