Polarising Filter Mist Light/PL PolarPro Shortstache Everyday 95mm

PolarPro 1/4 Black Mist ShortStache Polarizing Filter for 95mm Lenses.

The PolarPro 1/4 Black Mist ShortStache Polarizing Filter for 95mm Lenses is a unique combination of a polarizing and black mist filter that perfectly captures Garrett King's signature photographic aesthetic. It's an ideal choice for those who appreciate high quality images and a subtle, film-like look.

Precision and image clarity

The filter is equipped with a polarizer that ensures sharp and clear images, eliminating unwanted reflections. It will give you crisp images that perfectly capture every detail. This polarizer is especially useful in landscape and urban photography, where reflections from water, glass or metal surfaces can interfere with the composition. With the Helix Polarpro Shortstache polarizer, you gain full control over light, allowing for more saturated colors and deeper contrast.

Movie-like character

Thanks to the gentle diffusion of the mist, the filter adds a slight blurring effect to the lights, giving your photos a subtle, cinematic feel. The effect is reminiscent of classic analog films, where the light has a soft, ethereal look. The Everyday filter (1/4 mist) subtly softens the lights while maintaining depth in shadows/blacks. This adds dimension and character to your images. It's ideal for photographers and filmmakers looking for creative tools to enhance their work.

Stylish look

The filter features a matte green aluminum frame, which gives it a sleek and low-profile look on the lens. Such a design not only complements the style of your work, but also adds professionalism to your entire photography kit. The matte green frame does not reflect light, which is especially important in situations where minimizing reflections is crucial. In addition, the durable aluminum construction ensures that the filter will last for a long time without losing its aesthetic or functional qualities.

Uncompromising quality

The polarized glass used in the filter ensures zero color shift and exceptional clarity. It is an indispensable element, proving itself in both analog photography and commercial video productions. With the highest quality materials, this filter ensures that your photos will always look professional. The lack of color shift means you don't have to worry about additional post-production, which saves time and ensures natural results.
