DJI Transmission

DJI Mic wireless audio transmission system

Record excellent quality audio in almost any situation. The DJI Mic Wireless Audio Transmission System will give you crystal clear, natural sound and high immunity to interference. It guarantees wireless transmission up to 250m and offers up to 14 hours of built-in memory. Its operating time reaches 15 hours (with charging case). The product is also distinguished by its wide compatibility and lightweight, portable design. It allows 2-channel recording - it will also be great for recording interviews. The set includes 2 transmitters, a receiver and a charging case.

Ref: 6941565922588

High quality sound - 2-channel recording

With DJI Mic you can professionally record sound and enjoy almost unlimited freedom in the post-production process. The device brilliantly reproduces tones over a wide range of frequencies and excels in high fidelity reproduction. Forget about unpleasant rasps and artificial, unnatural sound! What's more, thanks to the 2 transmitters included in the set, the DJI Mic allows 2-channel recording. You will successfully use it when working on an interview or podcast! You can also record each channel on a separate track or combine them together.

Reliable wireless connection

Now you can record without any problems even in extremely complex scenarios. DJI Mic lets you enjoy a high-speed wireless connection with a range of up to 250m. The latest coding technology is responsible for its reliability. You also don't have to worry about delays or interference. The improved transmission system and 2.4GHz bandwidth guarantee stable transmission even in places like an office, train station or shopping mall. Free yourself from cables and gain almost unlimited freedom!

Practical charging case

Convenient charging and storage of your most important devices? It's possible! You'll find a practical case that offers enough space for the receiver and both transmitters, yet is small enough to easily fit in a backpack or bag. It allows you not only to charge your devices, but also to transport them safely. It also allows you to enjoy fast, hassle-free pairing. After the initial setup, the transmitters and receiver will automatically connect to your camera or phone when removed from the case.

Record for as long as you need

The DJI Mic will let you work as long as you need. The included receiver will keep you going for up to 5 hours on a single charge, and the transmitters for about 5.5 hours. Moreover, with the help of the case, you can extend this time to 15 hours! Want to check the charge level of your devices? Just take a peek at the receiver's touchscreen, which also allows you to conveniently change the channel, adjust settings and use various functions. What's more, both transmitters offer up to 14 hours of internal memory, so you can record your footage without worry.

Wide compatibility

Do you use several devices with different ports on a daily basis? No problem - the DJI Mic will fit them! The included receiver is equipped with USB-C, Lightning and TRS 3.5mm interfaces, which means it is compatible with most popular models of cameras, smartphones or laptops. The device is also extremely easy to install. With the help of a hot shoe adapter, you can easily attach it to a DSLR camera, mirrorless camera or phone mount.

Enjoy the freedom

Free your hands and get more freedom while recording. Each transmitter is equipped with a special clip so you can conveniently attach it to your shirt or coat, for example. The set also includes magnetic holders, which also allow you to attach the devices to your clothes. At the same time, the transmitters are extremely lightweight. Each of them weighs only about 30g - don't worry that they will be an excessive burden!

Reliable operation

The DJI Mic will meet any challenge you put before it. It will not let you down in any conditions. The included wind shield will allow you to get clear sound even in noisy environments or outdoors, and the multi-level gain adjustment from -12dB to 12dB allows you to find the optimal settings in almost any situation. Also noteworthy is the Safety Track feature. To give you peace of mind that you won't lose your footage in the event of any problems, the DJI Mic records an additional -6dB track as a backup.

In the box

- 2x transmitter
- Receiver
- Charging case
- Hot shoe adapter
- 2x magnetic mount

Lightning adapter
USB-C adapter
2x microphone cover
Microphone pouch
Charging cable
3.5mm TRS audio cable
