Interactive educational 2-in-1 walker + piano Huanger HE0621

Interactive educational 2-in-1 walker + piano Huanger HE0621

Huanger interactive walker supports the development of the little ones on many levels. The walker stimulates the sense of sight, helping children learn to distinguish colors and shapes and develop their imagination. With melodies, sounds and rattling, the toy supports auditory development, teaching the child to distinguish between different sounds. The walker encourages the child to lie on its back, which has a positive effect on posture and strengthens the muscles of the spine. The piano and rattles develop motor coordination, while the pusher helps the baby learn to walk and maintain correct posture.

Multifunctionality and safety

Huanger HE0621 offers a variety of play options: from lying on a mat with a headband and rattles, to exercising on the tummy with toys within reach of hands, to sitting and playing with rattles and a mirror. The piano music panel, which can be placed next to the crib, acts as a soother and sleeper, offering two-stage volume control. The walker provides stable support, allowing baby to enjoy safe and engaging play.
